New RediPulse Pro-12 Keeps Up To 12 Batteries Fresh All The Time

Dallas, TX — If you sell, stock or service lead-acid batteries, you need the **RediPulse Pro-12 Charge/Maintenance System** from PulseTech. It's designed to keep new batteries "factory-fresh" while they rest on the shelf waiting to be installed or sold. Batteries that sit idle suffer from damaging sulfation buildup (lead sulfate deposits on the battery plates). This buildup is the main cause of battery problems and failure. The Pro- 12 uses our scientifically-proven *ReNew-IT Pulse Technology*® to keep these deposits off the plates. By removing these energy-dampening deposits, your batteries can accept, store and release MAXIMUM power when you need it.

- Keeps up to twelve new 12-volt batteries fresh all the time while sitting on a shelf or in storage
- Will maintain 6-volt batteries if 2 are connected in series
- "Shelf-life" warranty issues and other battery-related expenses are reduced dramatically
- UL approved
- Can be mounted vertically or horizontally
- Spark-Proof and waterproof
- Low amperage and "smart" charging technology means there is no gassing
- Water resistant
- Three color indicators give condition of each battery
- Battery condition indicator is updated every two seconds
- Charging indicator verifies indicated battery is being charged
- Cables and battery clips are provided in sets of three and are removable and replaceable if damaged
- UL class 2 power supply designed for universal input will adapt to AC power anywhere
- Batteries must be at > 8 volts for Pro-12 to activate
- Steel-Nickel plated battery clips
- Warranty: 2 year limited
