

QUICKSTART GUIDE

QUADLINK[™]

Charge Multiple Batteries with a Single Charger

Model #: XC-QL4

Part #:100X004

Scan the QR code to download the manual and register your product for warranty coverage.

Included with your QuadLink purchase:

- ✓ 1 – QuadLink 4-station charger multiplier
- ✓ 4 – Eyelet lug adaptor cables
- ✓ 4 – 5' extension leads (Additional 5' and 25' lead extensions available separately)

GETTING STARTED

1. Inspect all cable leads and connections to be sure that they are all in good working condition.

2. Connect the output of your battery charger/maintainer to the input of the QuadLink.

3. Connect the extension leads that come with the QuadLink to either the standard attached battery eyelet connector on each vehicle battery and/or to the charging clip set that comes with your charger. Be sure to first connect the red battery clip to the positive (+) battery terminal. Then connect the black battery clip to the negative (-) battery terminal. Also, be sure to

double check that your attached eyelet terminal cable sets are properly polarized. Once you have connected the cable leads to all batteries in use, you can begin the battery maintenance process by plugging in your charger to your AC power source.

Your battery charger is still in full control of the charging processes. The QuadLink is almost transparent to the battery but it is charging your battery.
