

Description:

The Pallet Charger is a 12V, 6 amp per channel, 12-station charging unit that uses universal electrical input. The charger can be connected to any type or size of 12V lead acid battery (VRLA, AGM, gel and flooded cell). Each of the 12 charge stations operate in isolation from one another, allowing any combination of batteries to be recharged at the same time.

There's no need to move the batteries, simply roll the Pallet Charger to wherever the batteries are located. The HD Pallet Charger senses the condition of each individual battery and provides the appropriate charge without the risk of overheating or overcharging the battery.

Pulse Technology removes and prevents the buildup of sulfate crystals on the battery plates. This allows batteries to charge deeper, maintain greater reserve capacity and last up to 5 times longer. With one-switch control and progressive, easy-to-understand LED information display, operator training requirements are minimized. LEDs show battery disconnected, bad battery, recovery charge, pulse charge and charge complete.

[Update older PC-12 models with the Pallet Charger Upgrade Insert, Part #:746X805](#)

Specifications:

Input Electrical:	100-250 V ac, 7.5-15A, 50/60 Hz
Output Electrical:	14.9V, 72A; 12 Channels
Max Charging:	14.9V @ 6A per Channel
Enclosure:	Sand Steel cabinet on solid rubber wheels
Enclosure Dimensions:	17.5" x 28" x 14"
Operating Temperature:	0°F-130°F (-18°C-54°C)
Leads:	8' – 14AWG
Termination:	Battery clamps
Weight:	98 lbs. with leads
Mounting:	Mobile Unit
